

OPEN UP YOUR SPORTS GROUND TO VISUALLY IMPAIRED ATHLETES

Make your sports grounds easily available for visually impaired athletes and enable them to run, jump etc. on their own. With Nordic Evolution's digital audio guidance, you can reduce the need for available companions.

DIGITAL PATHS WITH AUDIO GUIDANCE

The Nordic Evolution guidance system is delivered to sporting grounds with custom designed audio paths for the athletes to follow. For athletics, this could for example be a digital path for the long jump, the 100-meter sprint and along a lap around the arena, that also could be used for warmups before other sports. In this way, your visually impaired athletes could enjoy some of the exercises without being dependent on a companion.

WHAT TO CARRY

Wireless earphones and the Nordic Evolution guidance module, which is 14 cm high, weighs about 100 grams and is worn with a custom headband. The system requires a WIFI-connection and if the arena does not have a network, it can be generated by a smartphone.

GUIDANCE MODULE

EARPHONES

NAVIGATE THROUGH AUDIO SIGNALS

While following a pre-recorded digital path, you hear infrequent signals in both ears. If you stray off the path, the side facing the center turns silent, while the signal gets increasingly frequent in the ear furthest away from center. This makes it easy to keep in the center while moving along a digital path.

CUSTOM AUDIO PATHS AROUND YOUR SPORTS GROUND

We can supply a digital guide system with customized audio paths to your sports ground. Contact us to discuss how we can reduce the need for available companions for the visually impaired athletes in your sports club.
